Mix'n'Shake™

Automated Stirring Technology

Stop Stirring, Get Spraying.

Patchy color, uneven surfaces, reduced adhesion... a poor paint mix can cause a host of problems for both body shops and painters.

PPG Mix'n'Shake is an innovative new system that replaces the manual stirring process to ensure a uniform paint mix and complete color accuracy every time.

Let's shake!

Using the **Mix'n'Shake** system can help boost the productivity of your body shops by saving time on reworks, improve profitability and sustainability by reducing wasted paint and consumables, and achieve a cleaner, more efficient painter experience.

Organized Chaos

At PPG, we know that a flawless finish relies on a perfect paint mix. That's why our technical experts have put years of research and development into creating the **Mix'n'Shake** system: an advanced stirring device and unique, specially designed cups.

Simply place the cup into the device, close the lid and select one of the three programs for primer, basecoat or clearcoat. The combination of speed, movement and the cup's three functional indentations allow every drop of paint to be blended into a fully uniform mix. **Mix'n'Shake's** exclusive stirring mechanism is scientifically proven to deliver consistent results every time.

Did you know?

On average, a body shop performing six repairs per day will waste **15 working days** (cumulated time per year) due to manual stirring activities.

Features

- Exclusive stirring mechanism, scientifically proven to give a perfect mix
- Easy to use with just three programs and compatible with virtually any paint system
- Compact for easy maneuvering throughout the body shop (optional bracket system available for wall mounting)
- Unique indented paint cup design
- One lid fits all cup sizes
- Cups connect to the spray gun using **Mix'n'Shake** adapter line for ultimate security
- Three cup sizes available: 400ml, 650ml, 850ml, with or without printed ratio

Benefits

Improved productivity 100% accuracy

Poorly mixed paint gives less-than-perfect results. **Mix'n'Shake** is a fully automatic system that eliminates the risk of human error, saves time on reworks and gives technicians the confidence of 100% consistency and color accuracy every time.

Greater profitability Up to 10% savings on consumables

Our **Mix'n'Shake** system helps body shops save money on stirring sticks, sundries, and prevent product waste, supporting more sustainable practices. Time previously used stirring can now be used on activities that deliver further value to your business, while reducing environmental impact and promoting a more efficient use of resources.

Cleaner work environment 100% focus on people

Our self-contained **Mix'n'Shake** system completely replaces manual paint stirring. This means fewer spills and splashes for a cleaner workspace and reduces the risk of employee exertion or painful injury from the stirring process.

Increased Efficiency Gain up to 6% productive hours

Painters can achieve a perfect mix quickly and easily with our automated stirring system, freeing up valuable time which can be allocated to other important tasks. Even better, the **Mix'n'Shake** device connects with the PPG LINQ™ digital ecosystem for even more benefits.
